

FESTIVAL SUCCESS

The Golden Spoon

Recommended/displayed Plan B · Rice bowl · \$15.00 per portion · 60 prepared

Planner A; Checker B. Three-hour festival. Sponsor targets: profit $\geq$ \$150 and waste $\leq$ 10%. Classroom costing model.

Recipe and purchasing ledger

Batch factor: 3 (checked). One batch makes 20 portions.

Ingredient	Prepared quantity	Unit price	Base line cost	Prepared cost
Grain / base	6 (checked) kg	\$5.00/kg	10 (checked)	30 (checked)
Vegetables	9 (checked) kg	\$6.00/kg	18 (checked)	54 (checked)
Protein	6 (checked) kg	\$20.00/kg	40 (checked)	120 (checked)
Sauce	1.5 (checked) L	\$20.00/L	10 (checked)	30 (checked)
Packaging	60 (checked) units	\$0.60/units	12 (checked)	36 (checked)

Batch variable total: 90 (checked) USD. Prepared variable total: 270 (checked) USD.

Unit cost: 4.5 (checked) USD/portion. Fixed launch expense: 450 (checked) USD.

Fixed fees: stall 200 + hire 150 + setup 100 USD. Packaging is included for every prepared portion.

Price and contribution

Contribution: 10.5 (checked) USD/portion. Markup: 233.3 (checked)%.

Markup denominator: cost. Contribution interpretation: cover.

Cost classification

Grain / base: variable · Vegetables: variable · Protein: variable · Sauce: variable ·
Packaging: variable · Stall: fixed · Hire: fixed · Setup: fixed

This draft/report records submitted work; unchecked values are not certified.

Show how the numbers work

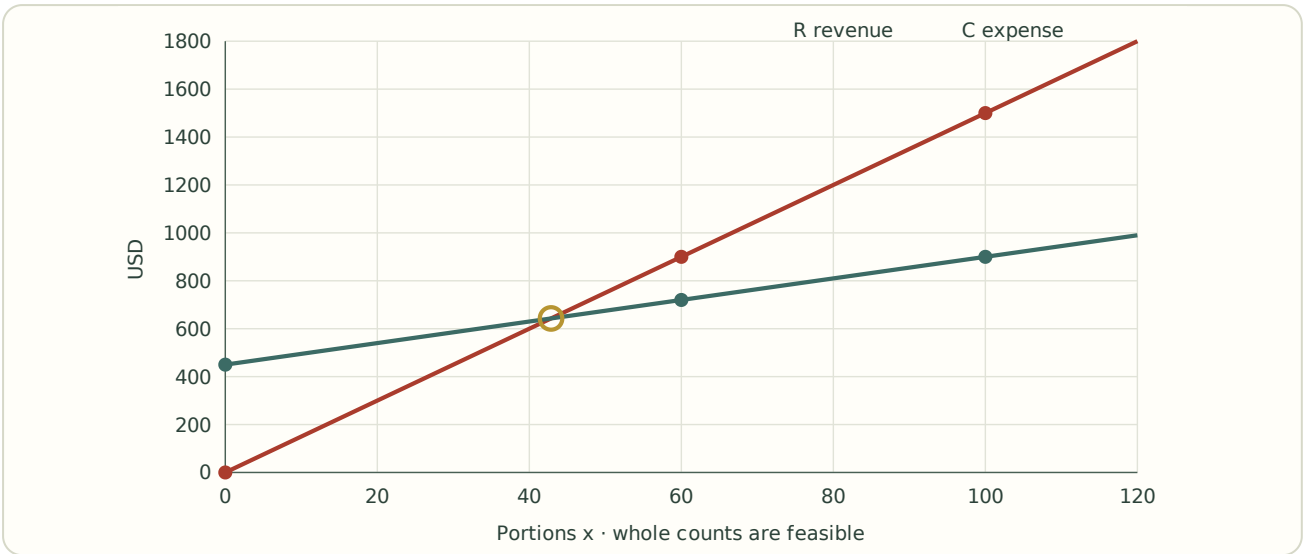

Sold-all assumption: x portions prepared and all x sold. Whole counts 0–120. Actual festival sales may be lower.

$R(x) = 15x$ (checked) · $C(x) = 450 + 4.5x$ (checked)

$P(x) = 10.5x - 450$ (checked)

Profit coefficient: 10.5 (checked) USD/portion; constant: −450 (checked) USD.

Portions	Revenue	Expense	R point entered	C point entered
0	0 (checked)	450 (checked)	(0, 0)	(0, 450)
60	900 (checked)	720 (checked)	(60, 900)	(60, 720)
100	1500 (checked)	900 (checked)	(100, 1500)	(100, 900)

Crossing ($\frac{300}{7}$ (checked), $\frac{4500}{7}$ (checked)); profit at 30: −135 (checked) USD. Verified lines shown.

Equality: $15x = 450 + 4.5x$ (checked). Exact crossing: $\frac{300}{7}$ (checked).

First whole non-loss: 43 (checked); first positive profit: 43 (checked). Before: −9 (checked) USD; at: 1.5 (checked) USD.

A launch. A revision. A decision.

Quantity	Plan A	Plan B
Price	12	15
Prepared stock	100	60
Capacity	96 (checked)	96 (checked)
Demand	90 (checked)	60 (checked)
Sales	90 (checked)	60 (checked)
Revenue USD	1080 (checked)	900 (checked)
Expense USD	900 (checked)	720 (checked)
Profit USD	180 (checked)	180 (checked)
Unsold portions	10 (checked)	0 (checked)
Waste %	10 (checked)	0 (checked)
Sell-through %	90 (checked)	100 (checked)
P(s) overstatement USD	45 (checked)	0 (checked)

Limits A: demand; B: stock,demand. Expense uses all prepared portions.

Profit B–A: 0 (checked); waste B–A: –10 (checked).

Recommendation: Plan B

profit: 180 (checked)

Plan B earns the same profit and leaves no meals unsold.

Reasoning review: pending. Festival success. Profit \$180.00; 0 portions unsold; sales limited by stock and demand.

Individual work and learning evidence

Learner A

Fee \$360, price \$14, variable cost \$5. Mode: digital. $P(x): 9x - 360$ (checked); break-even: 40 (checked); first positive profit: 41 (checked).

Submission: digital/recorded · review pending.

Learner B

Prepare 70, sell 56, price \$10, variable cost \$4, fee \$200. Mode: digital. Revenue: 560 (checked); expense: 480 (checked); profit: 80 (checked); waste: 14 (checked); sell-through: 80 (checked)%.

Submission: digital/recorded · review pending.
